DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 11-20 as filed on 9/25/06 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 11-20 are rejected under 35 U.S.C. 101 because they are directed towards nonstatutory subject matter.

A). The Examiner notes that "computer program product..." does not specify how the instructions are (a) associated with the medium, or (b) the nature of instructions. Data structures not claimed as embodied (or encoded with or embedded with) in a computer program product are descriptive material per se, and are not statutory, *Warmerdam*, 33 F.3d at 1361, 31, USPQ2d at 1760). Specifying the association in the manner listed above would sufficiently address the first condition. Similarly, computer programs claimed as computer listings, instructions, or codes are just the descriptions, expressions, of the program are not "physical things". They have neither computer components nor statutory processes, as they are not "acts" being performed. In contrast, a claimed "...computer readable medium encoded with a computer program..." is a computer element which defines structural and function interrelationships between the computer program and the rest of the computer, and is statutory, *Lowry*, 32 F.3d at 1583-84, 32 USPQ2d

at 1035. Specifying the instructions as a “computer program” would sufficiently address the second condition, Interim Guidelines, Annex IV (Section a).

B). Lastly, the computer program as claimed doesn't isn't properly associated with the operation. It is quite possible that the computer program may be an unrelated sub-routine or a simple commence instruction which then causes the computer to execute the operation that could be self-resident, and not encoded on the medium. The Examiner suggests that the computer program be more directly associated with the operation, Interim Guidelines, Annex IV (Section b).

Corrections to the claims, and supporting specification are required.

Conclusion

4. Claims 1-10 are allowed.

5. Independent claim 1 recites “...calculating respective vector differences between a primary set of motion vectors associated with a first number of blocks adjacent to the target block and one or more of a secondary set of motion vectors respectively associated with a second number of blocks also adjacent to the target block; and selecting a motion vector among said primary set of motion vectors corresponding to a smallest one of said vector differences or to a smallest sum of vector differences associated with the respective motion vectors of said primary set as the motion vector prediction...” which is feature that is not anticipated nor obvious over the art of record. Accordingly, claims 11-20 are amended as suggested above, or canceled, the application would be placed in a condition for allowance.
